## Welcome to IPP Days

The continuity of establishing NSDI started in 2007 as NSDI was legally prescribed for the first time by the Law on State Survey and Real Estate Cadastre. The accession of the Republic of Croatia in European Union made it obligatory for Croatia to make the INSPIRE Directive part of national legislative, and it was accomplished by the Law on NSDI. Croatia was thus obliged to respect the time schedule defined in NSDI, which presents new challenges, but also new opportunities for the establishment and development of NSDI.

IPP Days 2014 aim to contribute to the development of NSDI by providing the opportunity to review the situation, exchange experience and increase the capacities, so that challenges can be achieved as successfully as possible and new opportunities used. This year's IPP Days will be held on 11. and 12. September 2014 at the Faculty of Geodesy, University in Zagreb.

### IPP Days 2014 include:

- Workshop with the members of NSDI Working Groups, and 6. NSDI and INSPIRE Day.
- The range of topics to be addressed at IPP Days 2014 and the invited presenters promise very interesting lectures.

### Conference topics

- INSPIRE and NSDI implementation
- Legal regulations in the function of NSDI
- Subjects and data of NSDI
- NSDI and "Digital Agenda 2020"
- Thematic infrastructures
- Services of e-government
- Risk management
- Environmental protection
- Environmental influences
- Integrated spatial analyses
- Open data and initiatives
- Other NSDI and INSPIRE topics

## 5<sup>th</sup> Croatian Congress on Cadastre with international participation

Croatian Geodetic Society organised the V. Croatian Congress on Cadastre with international participation. It was held in the congress centre of the hotel Antunović in Zagreb from 8<sup>th</sup>–9<sup>th</sup> May 2014. The most recent scientific and professional achievements in the fields of legislation, cadastre, land registry, geodesy and geoinformation system, as well as their role in addressing equity and spatial relationships, were presented to the participants.

The State Geodetic Administration participated actively in the work of the Congress. Its director, Mr. Danko Markovinović, PhD held the presentation within the frame of invited lectures titled *Role and Purpose of Cadastral Records in the Republic of Croatia*.

When presenting the legislative framework, SGA presented a few topics:

- *Geodetic project* – Marinko Bosiljevac, Davor Marinović, Mladen Pandža
- *Draft of the Law on State Survey and Real Estate Cadastre* – Marinko Bosiljevac, Ivica Ivšić, Antonio Šustić
- *Homogenisation of cadastral plans* – Maja Pupačić
- *Mutual Information System (LIS) – current status and further activities* – Maro Lučić, Tatjana Pinhak
- *One Stop Shop – user service of LIS* – Tatjana Pinhak, Marinko Bosiljevac
- *View at LIS from cadastral office* – Jelica Donđivić

Within the scope of work sessions, the representatives of SGA held a few interesting presentations:

- *Quality control of digital cadastral plans* – Stjepan Grđan, Irena Busija, Branka Vorel Jurčević
- *Overview of free components, libraries and open code programmes for cadastre* – Zlatko Horvat
- *New data model CROTIS 2.0 and its implementation in new spatial base* – Ivan Landek, Marijan Marjanović, Ivana Šimat
- *Regulation on Aerial Survey* - Davorka Brkić, Ivan Landek, Marijan Marjanović
- *System of digital archives as a part of the infrastructure of modern cadastre* – Damir Šantek, Irena Benasić, Ivica

Ivšić, Ines Sukić-Majstorović, Ljiljana Štefulić, Ozren Šukalić, Ljerka Vuković-Jelčić

- *The situation in cadastral system along the Croatian-Slovenian border* – Ilija Grgić, Mirjana Jurić, Davor Kršulović

The Proceedings were printed and published containing the majority of presented lectures. More than 500 participants took part in the work of the Congress that was excellently organised.

Davorka Brkić, Ivan Landek

## 31<sup>st</sup> expert conference of geodetic agencies – Czech Republic, Lednice

From 28<sup>th</sup>–30<sup>th</sup> May, 12014, the 31<sup>st</sup> expert conference of geodetic agencies of Croatia, Austria, Slovenia, South Tyrol, Trentino, the Czech Republic and Hungary (Fachtagung) was held in the Czech Republic in Lednice. The Croatian representative at the conference came from the Central Office of the State Geodetic Administration, Zoran Vujić, the head of the Department for the development of Geoinformation Systems, and Jadranka Bratić from the Department for first-instance proceedings and surveillance.

Related to the topic of this year's conference *Cooperation with Other Public Administration Organisations – Connections of Registers*, the presenters unveiled the present situation, endeavours and projects that are used to make cadastral data available to other organisation of public administration, the projects and problems that they are faced with when taking over the data from other information systems belonging to various organisation of public administration (address information, personal data, new buildings that have been given operating licenses, geographic data, property rights, protected areas and objects, the quality of buildings), data exchange with land registries, with local self-government units (related to addresses and urban development plans), with tax administration (related to land evaluation and taxation), with the ministry and other bodies responsible for agriculture and forestry (related to allocation of incentives), as well and the novelties from the last conference. Mr. Zoran Vujić presented the Croatian national e-strategy and programmes, legal regulations, implemented projects of the State Geodetic Administration (with the Ministry of Finance) and project being prepared (register of spatial units as web service to be used by the Ministry of Interior and Ministry of Administration), and Jadranka Bratić presented the current situation (LIS, cadastral surveys) and the novelties that have influenced the work of the State Geodetic Administration (legislation, geodetic project) in the last year.

Out of many interesting information exhibited at the conference, we would like to point out one interesting information from Hungary about ingenious and efficient way of using cadastral data and geodetic methods in public admi-

nistration (monitoring the status of allergenic plants on the basis of satellite images that are connected with cadastral plans and information about owners and used by the Agency for the Protection of Plants, Soil and Agricultural Land for direct activities related to warning land owners about the necessity to remove such plants and about possible fines, or to combine official data and geodetic methods for the purpose of monitoring the situation with buildings and determine the heights of buildings with high accuracy).

Apart from the working part, the programme include also the visit to the castle Lednice and its park in the afternoon (UNESCO world heritage), the visit to the city office Břeclav and the visit to the cellars of the town Valtice. The host of the next, 32<sup>nd</sup> Fachtagung, will be the Italian province Trentino, with the topics related to the usage of cadastral data as the basis for taxation, new survey and the new situation in land administration.

Zoran Vujić i Jadranka Bratić

# Slavica Žufić, memorial

15. 8. 1950 - 18. 3. 2014

All of us in the Regional Cadastral Office Pula were deeply shaken on the 19. March, 2014 by the sad news of the death of our colleague Slavica Žufić. Very soon after learning about the details of her “sudden” death, it became clear that our Slavica, normally very tough and proud lioness, managed to hide for a longer time the fact that she was fighting with a serious disease, completely alone, even without the help of doctors. We were all surprised by unpleasant news coming quickly one after another in the last ten days of her life and ending with the saddest one.

Slavica Žufić spent almost all her working days in cadastral work, working continuously for almost thirty nine years. This fact calls for respect and speaks of dedication and loyalty, but obviously also of her love to cadastral tasks that she performed. She taught many of us as a mentor about individual jobs to be

performed by cadastral clerks, and her knowledge of the archives in general was especially impressive. Slavica's private life was rather unknown, but everyone who knew her was aware that a sport was a very important part of her life and her great love. In her younger days, she played basketball, and for some time very successfully women's football that was only in its beginnings at that time, so that part of her sports career took place in Italy.

It is not necessary to point out how the loss of such experienced employee can create a void in the functioning of the office, however, it is especially difficult to cope with the loss of a dear person and colleague. We, therefore, thank on this occasion to Slavica for everything she offered to us in Pula, and likewise to this Administration during her lifetime.

May she rest in peace!

RCO Pula
